**Annual Oral Rabies Vaccine Bait Program to Begin**

**Watertown, NY** – The United States Department of Agriculture, Wildlife Services program (USDA-WS) will distribute oral rabies vaccine (ORV) baits in New York, including Jefferson County. Weather permitting, ORV baits will be distributed throughout Jefferson County beginning August 1<sup>st</sup> through August 4<sup>th</sup>. Bait distribution in New York is part of a nationwide, cooperative effort by USDA to prevent the westward spread of raccoon rabies in the eastern U.S.

Baiting will be done through both aerial baiting with low flying aircraft and hand baiting in some areas. Distribution of baits is weather-dependent and inclement weather may result in extended distribution. Each vaccine-containing bait consists of a plastic blister pack coated with a sweet attractant to entice animals to eat the bait. When raccoons, foxes, skunks and coyotes eat the bait, they become vaccinated against rabies which helps stop the spread of rabies.

If you find an ORV bait (pictured below), follow these simple steps:

- Leave the bait untouched, unless it is in a lawn or driveway. Instruct children to leave the baits alone.
- If intact baits are found in areas frequented by children or pets, pick it up with paper towels/gloves and toss it into a brushy or forested area.
- If the bait is broken, the liquid should be visible. Use gloves to place the bait into a plastic bag. Cover the bait with 1:10 dilution of bleach and wipe down affected areas with bleach solution. Place the cleaning materials in a bag and dispose of in your regular garbage.
- If you have contact with a bait, wash your skin with soap and water. Contact the phone number on the bait or call Jefferson County Public Health Service (JCPHS) at 315-786-3700 for further guidance.
- Do not attempt to remove a bait from your pet, as you may be bitten. The bait is not harmful to your pet. If by chance numerous baits are consumed, your pet may get an upset stomach. If your pet ingests a bait, avoid getting your pet's saliva into your eyes, mucous membranes or skin lesions for 24 hours.

Always notify your medical provider or JCPHS if you are bitten by a pet or a wild animal. Additionally, keep your pets up to date on their rabies vaccination. JCPHS will be hosting summer rabies vaccination clinics throughout the month of August. The clinic dates and locations are listed at [www.jcphs.org](http://www.jcphs.org).
