### Two Raccoons Reported to Have Rabies

**Watertown, NY** – The New York State Department of Health Wadsworth laboratory has reported to the Jefferson County Public Health Service that two raccoons have tested positive for rabies. Both raccoons were submitted by the United States Department of Agriculture (USDA) for testing. One raccoon was located in the Town of Clayton and the other was located in the Town of Brownville. There are no known human or pet exposures.

These raccoons are the 5<sup>th</sup> and 6<sup>th</sup> animals to test positive for rabies in Jefferson County this year. So far in 2025, four other raccoons also tested positive for rabies.

Rabies is a fatal disease that attacks the brain and spinal cord. It can take several weeks to several months for rabies symptoms to appear. Early treatment after an exposure can prevent rabies in humans and in pets who are up to date on vaccination. Any mammal can get rabies, but it is most often seen in bats, raccoons, skunks, and foxes. Animals do not have to be aggressive or behave erratically to have rabies. Changes in any animal's normal behavior can be early signs of rabies.

Rabies cases have been identified across Jefferson County. Therefore, any unknown animal could have rabies. Avoid contact with unknown animals, including possible stray pets, as they may not have been vaccinated against rabies.

Please take these steps to help prevent the spread of rabies:

1. Teach children to stay away from unfamiliar animals, either wild or domestic, even if they appear friendly. Remind them to tell you if they have any unusual contact with an animal.
2. Do not leave pet food outside as it attracts wildlife to your home.
3. Wash any wound from an animal encounter thoroughly with soap and water and seek medical attention immediately.
4. Be a responsible pet owner by keeping your pet's vaccinations current – even strictly indoor pets. Getting your pet vaccinated by your vet or at a clinic (Petco, Tractor Supply and Pet Supplies Plus offer rabies vaccination clinics) can help stop the spread of rabies from wild animals to humans. JCPHS is hosting a **rabies vaccination clinic on Thursday, May 15 5:00 – 7:00pm at Jefferson County Dog Control**. Visit [www.jcphs.org](http://www.jcphs.org) for more information.
5. Monitor your pet when they are outside. If your pet is involved in an altercation with a wild animal, do not get in between them. Do not touch your pet without gloves as rabies is spread through saliva. Cover your pet with a towel and contact your vet as your pet may need a booster shot.
